## Summary

Full-stack developer with 20 years of hands-on experience building and running web products end to end: PHP/WordPress backends, Vue.js frontends, Linux servers and app-store releases. Created FirmaSite App Solution, a bridge between WordPress and the Quasar Framework that turns a WordPress site into web, iOS, Android, Windows and macOS apps from one codebase. Author of a wordpress.org theme with 300+ active installs and a 4.8/5 rating. Builds with AI coding agents (Claude Code), works asynchronously and writes clear technical English. Native Turkish speaker.

### Flagship Project: FirmaSite App Solution

FirmaSite App Solution is a bridge between WordPress and the Quasar Framework (Vue.js). WordPress stays the backend and editor; Quasar delivers the frontend as a website, a progressive web app, and native iOS, Android, Windows and macOS apps from one codebase. Designed and built solo, across backend, frontend and server.

- **Backend, permalink-aware REST API:** custom endpoints resolve any WordPress permalink structure (post name, date-based, numeric) to JSON, including Gutenberg content and block-based template parts such as headers, footers and archive loops. Existing sites move to a Quasar frontend without changing a single URL. Live example
- **Rendering, SEO without a Node.js server:** pages arrive as ready Gutenberg HTML, then the Vue app takes over seamlessly in the browser. Search visibility and Core Web Vitals (FCP, LCP) stay healthy on ordinary WordPress hosting; full server-side rendering is also supported.

- **Editor, Vue inside Gutenberg:** Vue.js components run inside WordPress admin panels, so developers can build interactive custom blocks such as sliders.
- **SEO, Yoast in Vue:** canonical URLs, meta tags and Schema.org data carried from Yoast SEO into the Quasar frontend.
- **Apps, one codebase for every platform:** Capacitor packages the iOS and Android apps, Electron the Windows and macOS apps.

## Skills

- **Languages:** PHP, JavaScript (ES6+), SQL, HTML5, CSS3, Sass/SCSS
- **Frontend & apps:** Vue 3 (Composition API, `<script setup>`), Quasar, Vite, Pinia, PWA (Workbox), Capacitor (iOS, Android), Electron (Windows, macOS, Linux), Dexie.js (IndexedDB, offline-first)
- **WordPress:** theme and plugin development, Gutenberg blocks, Multisite, headless WordPress, custom REST API endpoints, WooCommerce, ACF, Yoast SEO, BuddyPress, bbPress, Gravity Forms, Pods
- **Servers & DevOps:** Debian, Ubuntu (previously CentOS), Nginx, Apache (HTTP/2), MySQL, MariaDB, PHP-FPM, Docker, Portainer, Virtualmin, Webmin, BIND (DNSSEC), Postfix, Dovecot, SpamAssassin, ClamAV, Fail2Ban, CSF
- **Tools & AI:** Git (self-hosted GitLab), npm, ESLint, Prettier, PostCSS, Claude Code (AI coding agent), prompt and agent design
- **SEO & performance:** Core Web Vitals (FCP, LCP), canonical URLs, meta tags, Schema.org structured data
- **Publishing:** developer accounts on Google Play, Apple App Store, Microsoft Store and Chrome Web Store

## Experience

### Full-Stack Developer — FirmaSite LTD

United Kingdom (remote, from Antalya) · 2022 – 2026

- Designed, built and run FirmaSite App Solution single-handedly: architecture, WordPress plugin and REST API, Quasar frontend, app packaging, Linux servers and store releases.
- Published FirmaSite App Solution on Google Play to show the toolkit's native features: camera, GPS, network status, vibration, barcode scanning, offline data and a restaurant menu with its own custom post type and admin panel.

### Independent WordPress Developer

Türkiye · 2005 – 2022

- Built and maintained websites for local businesses: custom themes, plugins and blocks, WordPress Multisite, and search-engine optimization.
- Created the FirmaSite theme on wordpress.org: 300+ active installs, rated 4.8/5 from 42 reviews. Mobile-first, multilingual, 15 design variations, BuddyPress/bbPress support, WordPress Coding Standards.
- Developed a premium edition with WooCommerce support, a currency-exchange shortcode using European Central Bank rates, and a page-building block system for BuddyPress groups and forums, released before Gutenberg and Elementor existed.
- Set up and ran production Linux servers end to end: web, database, DNS, mail, spam and virus filtering, and security hardening.

### Languages

- **Turkish:** native
- **English:** professional working proficiency, strong written communication
